PIXEL ACADEMY

PROMPT PACK · PIXEL ACADEMY

# 21 prompt, որ մենք օգտագործում ենք

Copy արա, փոխիր [քառակուսի փակագծերը] և աշխատիր Claude-ով, ChatGPT-ով, v0-ով կամ Figma Make-ով: Յուրաքանչյուր prompt մեր reel-երից է:

1. **Claude-ի գաղտնիքները** · Դիզայն, animation և ինքնաստուգում Claude-ով
2. **AI + Դիզայն** · v0, ChatGPT, Figma Make, Claude Code և ուրիշ գործիքներ
3. **Pixel-ի կուլիսները** · SMM agent-ի կանոնների ձևանմուշ

## Claude-ի գաղտնիքները

Դիզայն, animation և ինքնաստուգում Claude-ով

### 01 Claude-ը ստուգում է իր դիզայնը

```
After you build it, open the page in a browser, take screenshots at 390px and 1440px, compare them with the reference, and fix the top 3 differences. Show me before and after.
```

### 02 Կայքի DNA-ն

```
Analyze this screenshot. Extract the design system only: type scale, spacing scale, number of colors, corner radius, motion durations. Don't copy content or layout. Apply these rules to my brand: [colors, fonts].
```

### 03 Motion spec

```
Before coding, write a motion spec table: element, trigger, duration (ms), easing (cubic-bezier), delay/stagger. Use 150–400ms and one easing curve for the whole page. Then implement it.
```

### 04 Claude-ը որպես art director

```
Act as a senior art director. Critique this page harshly: hierarchy, spacing, contrast, consistency. List the 5 biggest problems by impact, then fix only the top 3.
```

## 05 Scroll animation առանց JS-ի

```
Animate each section as it enters the viewport using CSS scroll-driven animations (animation-timeline: view()). No JavaScript. Add a fallback for unsupported browsers and respect prefers-reduced-motion.
```

## 06 Անվանիր գործիքը

```
Use GSAP with ScrollTrigger: pin the hero, scale the product image from 0.8 to 1 while scrolling, then release. Add Lenis for smooth scrolling.
```

## 07 Կոդից Figma

```
Take this page and send it to Figma as editable layers, using our existing components where possible.
```

## 08 Design tokens

```
Export all colors, fonts, spacing and radii from this page as design tokens in tokens.json and as CSS variables with light and dark themes.
```

## 09 Landing page-ի ճիշտ brief

```
Design a landing page for [product].
Users: [who they are]. Goal: [one action they should take].
Style: [2-3 words], one accent color [#hex], references: [site 1], [site 2].
Give me 3 different visual directions first, with a short explanation each.
Don't build the full page until I choose one.
```

## 10 Միայն քո դիզայն համակարգով

```
Here is our design system: colors, fonts, buttons and cards (attached).
Design a [page] using only these tokens and components.
If something is missing, tell me instead of inventing a new style.
```

## 11 «Թրենդային» 4 բառով

```
Redesign this section to feel current, not generic:
- typography: very large headline, tight letter spacing, one font family
- space: at least 120px between sections
- color: neutral base, one accent color only
- motion: subtle hover animation on buttons and cards (200ms ease)
Keep the content the same.
```

### 12 Hero animation մեկ ֆայլով

```
Create a hero section animation in HTML and CSS only:
- the headline appears letter by letter, 40ms per letter
- the background is a slow-moving gradient (pink to orange), 12s loop
- respect prefers-reduced-motion
Give me one file I can open in the browser.
```

## AI + Դիզայն v0, ChatGPT, Figma Make, Claude Code և ուրիշ գործիքներ

### 13 Figma-ից կայք Claude Code-ով

```
Implement this Figma design: [Figma URL]

Use the existing design system where available.
Match typography, spacing, colors, and layout.
Build responsive desktop and mobile views.
Add working interactions.
Run the project and report any differences from Figma.
```

### 14 ChatGPT-ն օգնում է prompt կազմել

```
Act as a senior UX/UI designer.

Help me create a detailed prompt for an AI website builder.

Ask me about:
- Business and target audience
- Website goals
- Pages and sections
- Visual style
- Key user actions
- Mobile requirements

Then create one structured website-generation prompt.
```

### 15 Նույն prompt-ը 3 գործիքում

```
Design a sign-up page for a 4-month UX/UI design course.

Include: a headline, 3 key benefits, a short sign-up form (name, email, phone), and one primary
button.
Style: modern, confident, lots of white space, one accent color.
Make it responsive.
```

## 16 Աշխատող պրոտոտիպ Figma Make-ով

```
Build an interactive appointment booking page.

Include:
- Date selection
- Available time slots
- Name and email fields
- Form validation
- Confirmation state
- Responsive mobile layout

Use a clean, minimal interface.
```

## 17 Կայք առանց կոդի v0-ով

```
Create a responsive website for a family bakery in Yerevan.

Goal: visitors order a custom cake in under a minute.
Style: warm, handmade, cream and deep cherry, generous white space.
Sections: Hero with order button, Bestsellers, Custom cake form, About the family, Location and hours.
Use strong typography and a mobile-first layout.
```

## 18 Accessibility Claude-ով

```
Audit this page for accessibility (WCAG 2.2 AA).

Check:
- Text contrast (at least 4.5:1 for body text)
- Tap target size (aim for 44×44 px; the WCAG 2.2 AA minimum is 24×24 px)
- Missing alt text and form labels
- Keyboard focus visibility

List each problem with the element, why it matters, and the exact fix. Then apply the fixes without changing the visual style.
```

## 19 UX սխալներ ChatGPT-ով

```
Act as a senior UX/UI designer.

Analyze this landing page screenshot.

Review:
- Visual hierarchy
- CTA visibility
- Readability
- Spacing and alignment
- Clarity of user journey

Identify 3 specific potential UX problems.
Explain why each matters and suggest a practical fix.
Do not assume user behavior without evidence.
```

### 20 Հաշվիչ v0-ով + դիզայների քայլը

```
Build a responsive service pricing calculator.

Features:
- Select a service
- Enter quantity
- Choose optional extras
- Calculate total price automatically
- Show a clear pricing summary
- Add a reset button

Use a modern minimal UI.
Make all calculations functional.

--- Step 2 (design pass) ---
Improve the visual design: one accent color, make the total the most prominent element, group
options into clear sections, tap targets at least 44px.
```

## Pixel-ի կուլիսները SMM agent-ի կանոնների ձևանմուշ

### 21 SMM agent-ի կանոններ

```
You are the social media assistant for [brand].
Language: Armenian, friendly but literate, "դու" form.
Never invent reviews, numbers, prices, dates or people. If you don't know, ask me.
Every post has: a hook in the first line, one useful idea, a save line and a question.
Before publishing anything, show me the final version and wait for my OK.
```
